

# Enterprise Website Builder

Get an awesome website, easily customizable

Create enterprise grade website with our super easy builder. Use finely designed building blocks and edit everything inline.

Benefit from out-of-the-box business features; e-Commerce, events, blogs, jobs announces, customer references, call-to-actions, etc.

## Edit Anything Inline

What You See Is What You Get. Really!

Create beautiful websites with no technical knowledge. OpenERP's unique '*edit inline*' approach makes website creation surprisingly easy. No more complex backend; just click anywhere to change any content.

"Want to change the price of a product? or put it in bold? Want to change a blog title?" Just click and change. What you see is what you get. Really.

Awesome. Astonishingly Beautiful.  
Design using clean building blocks

OpenERP's building blocks allow to design modern websites that are not possible with traditional WYSIWYG page editors.

Whether it's for products descriptions, blogs or static pages, you don't need to be a professional designer to create clean contents. Just drag and drop and customize predefined building blocks.

Enterprise-Ready, out-of-the-box  
No synchronization, full integration.

Activate ready-to-use enterprise features in just a click; e-commerce, call-to-actions, jobs announces, events, customer references, blogs, etc.

Traditional eCommerce and CMS have poorly designed backends as it's not their core focus. With the OpenERP integration, you benefit from the best management software to follow-up on your orders, your jobs applicants, your leads, etc.

## A Great Mobile Experience

Responsive content on all pages

Get a mobile friendly website thanks to our responsive design based on bootstrap. All your pages adapt automatically to the screen size. (mobile phones, tablets, desktop) You don't have to worry about mobile contents, it works by default.

## Attract New Visitors Efficiently

SEO tools at your finger tips

The *Promote* tool suggests keywords according to Google most searched terms. Search Engine Optimization tools are ready to use, with no configuration required.

Google Analytics tracks your shopping cart events by default. Sitemap and structured content are created automatically for Google indexation.

## 1. Define Keywords describing your page content

Keywords

CRM, Leads

Here are the most searched topics related to these keywords, ordered by importance

Leads [online](#) [management](#) minecraft leads360 open source

[CRM](#) dynamics customer system social open source

YourCompany apps [opendays](#) [review](#) download

Your page content covers only [3 keywords](#) ! try to get at least 5.

# Multi-Languages Made Easy

Propagate changes and automate translations

Get your website translated in multiple languages with no effort. OpenERP proposes and propagates translations automatically across pages, following what you edit on the master page.

Benefit from professional translators to translate all your contents automatically with the Gengo integration. Update any part of your website and the translated versions are pushed automatically in a few hours.

# Designer-Friendly Templates

Designers love working on OpenERP

Templates are awesome and easy to design. You don't need to develop to create new pages, themes or building blocks. We use a clean HTML structure, a bootstrap CSS. Customize every page on the fly with the integrated template editor. Distribute your work easily as an OpenERP module.

The screenshot shows a web editor interface with a dark theme. At the top left is a blue 'Edit' button, and at the top right is a 'Promote' button. Below the editor title 'Homepage (unsaved changes)', there are 'Save' and 'Format' buttons. The main area displays HTML code for a carousel. The code includes a `<t t-call="website.layout">` tag, a `<div id="wrap">` container, and a `<div id="myCarousel">` element. Inside the carousel, there is a `<div class="carousel-inner">` containing a `<div class="item active text_only">` with a `<div class="container">` for content. The content includes an `<h1>` and `<h3>` tag, a `<p>` with a link, and a `<div class="carousel-image">` containing an `` tag. Line numbers 1 through 18 are visible on the left side of the code editor.

## Fluid Grid Layouting

Organize building blocks easily

Design perfect pages by drag and dropping building blocks. Move and scale them to fit the layout you are looking for.

Building blocks are based on a responsive, mobile friendly fluid grid system that appropriately scales up to 12 columns as the device or viewport size increases.

# Professional Themes

## Change Theme in Just a Click

Design a custom theme or reuse pre-defined themes to customize the look and feel of your website.

Test new color scheme easily; you can change your theme at any time in just a click.
